Wix Page

George Emmeneggar Notes on Improvements:

- Your navbar logo and label are in the same spot. Make sure to separate them!
- Home page photo and text area needs more central padding and alignment.
- Why does the Home page resume button go directly to the resume instead of the Resume page?
- Remove space between HTML/React and Node.js/Ruby cards.
- Contact page could probably fill the left-side whitespace with a photo/design/quote or something.
- Resume page could use icons of each part of the resume to go with the company.
- In the Links page, the logos for each company repeats like a pattern, would look better as a singular icon each.
- Java and React Link buttons are not in the same style as the Codeboxx link button.
